

Some notes when using my WhatsforDinner app:

On the spanner image of the main screen:

- To get the user and app information, you need to click the image a little long to get the pop up text box

New Dish Screen:

- When you click the add button image to add photo to the meal, the app will get you to the download folder to choose photo. In case if you do not see any photo in there, please following below steps to get photo:
 1. Click home button, and open the internet browser to and search for image that you want and long press on the image to save the image to the download folder.
 2. Then on the search bar, search for the apps and open it again or you can rebuild the app to get it starts again
 3. Now, you can click the add button (+) to go to download folder, your image should be there for you to choose
- When you enter the exist recipe name or forgot to enter the name, you will see the little pop up alert message to state what wrong with your recipe name near by the submit button
- You can reset the database/ app with empty meal, you can change version of database up to 1 (example: current version is 4, change it to 5)

Please click or copy the link below to go to my demo video on youtube.com:
